

CHARGED WITH ENERGY

There are three electric power packs that stand for Porsche's dedication to the sports car of the 21st century. While the interplay of combustion engine forces and **HYBRID TECHNOLOGY** is interpreted differently in the **911 GT3 R HYBRID**, the **CAYENNE S HYBRID**, and the **918 SPYDER** hybrid supercar, each of these three approaches aims for greater power and lower fuel consumption—namely, for greater efficiency—on the racetrack and on the road.

So while three new intelligent drive concepts are represented at this rendezvous, all three follow the same principle: **"PORSCHE INTELLIGENT PERFORMANCE."** Porsche has seldom been as charged with energy as it is now. Turn the pages for a more detailed presentation of these world premieres.
