**Note on the use of winter tires.**

Summer tires provide optimal performance at ambient temperatures above approximately 44°F. Below this point, the tire compound begins to harden and braking distances are increased.

We therefore recommend that you fit winter tires during the colder months of the year so that you can drive your 911 Sports Car safe in the knowledge that it will continue to drive even at low

temperatures. All winter tires approved by Porsche are identified by the “N” designation on the sidewall.
